

Scenarios:

- College Student
 - Evelyn is worried about employment after college and wants to make sure her field is growing. She wants to make sure she is in the right field for her, while also being able to make a living in her field of choice.
- High Schooler
 - John has been tasked to find jobs that he might want to do when he graduates from high school or college as an assignment. He wants to be able to see a list of different jobs, how much money those jobs earn, and what degree is required of each.
- Unemployed Individual
 - David has been told by his parents that he needs to get a job and move out. David has wanted to move out for a while now, but wants to know what jobs will give him a career with his current schooling.

User Stories:

- As a **College student** I want to figure out how my job is doing in the job market so I can decide if I should pivot into a different career.
- As a **High Schooler** I want to figure out what industry to go in so that I can map out a career path for myself
- As an **Unemployed Individual** I want to know what career paths I can get into so that I can earn more money and figure out what job occupation needs less formal education.

Features List:

- Data storage: Website will store answers to questions during a quiz so that they can be used for comparisons.
- Quiz: Website will present users with a quiz featuring text fields they can interact with to receive comparison data.
- Comparisons: Users are given statistics comparing them to other people, using the Bureau of Labor Statistics data we are sourcing.
